

## Patient Information

If used during pregnancy, ZEPOSIA® (ozanimod) can harm the unborn baby. Potential risks include loss of the unborn baby and birth defects.

- Do not use ozanimod if you are pregnant or breast-feeding, or could become pregnant and are not using effective birth control.
- **Before starting treatment with ozanimod:**
  1. Your doctor will explain the potential serious risks associated with ozanimod to an unborn baby and will regularly inform you how to minimize the risks.
  2. Your doctor will carry out a pregnancy test and it must be negative.
  3. You will need to use effective contraception to avoid becoming pregnant. Talk to your doctor about the most effective contraception options available to you.

- **While you are taking ozanimod and after you stop treatment:**
  1. You must use effective contraception without interruption while taking ozanimod and for 3 months after you stop taking it. Pregnancy tests will be repeated during treatment.
  2. Tell your doctor immediately if you become pregnant or think you may be pregnant whilst taking ozanimod, or for 3 months after you stop taking it. Your doctor will discuss the risk of harmful effects to the baby associated with treatment and ultrasound examinations will be offered if needed. Ozanimod must be stopped during pregnancy.
  3. If you are planning to get pregnant, talk to your doctor. Your doctor will need to stop your treatment 3 months before planning a pregnancy.

4. If your treatment is stopped, there is a possibility that the disease may return. Tell your doctor right away if your disease related symptoms get worse after stopping treatment.

Please see the back of this reminder card for your prescriber's contact information.

For more information about the effects and side effects of ozanimod, please refer to the Patient/Caregiver Guide for ozanimod.
