GUIDANCE FOR INDUSTRY
POST-MARKETING VIGILANCE REQUIREMENTS FOR
THERAPEUTIC PRODUCTS

PREFACE

This document is intended to provide general guidance. Although we have tried to ensure that the information contained here is accurate, we do not, however, warrant its accuracy or completeness. The Health Sciences Authority (HSA) accepts no liability for any errors or omissions in this document, or for any action / decision taken or not taken as a result of using this document. If you need specific legal or professional advice, you should consult your own legal or other relevant professional advisers.

In the event of any contradiction between the contents of this document and any written law, the latter should take precedence.

Annex II Summary of Safety Reporting Requirements.....	27

1 INTRODUCTION

This guidance references the Health Products Act (Chapter 122D), Health Products (Therapeutic Products) Regulations 2015.

1.1 PURPOSE & SCOPE

This guidance applies to (i) registrants, manufacturers, importers and suppliers of registered therapeutic products and (ii) importers of unregistered therapeutic products for patients' use in Singapore.

The purpose of this document is to provide guidance on the **submission of relevant safety information** to the Vigilance and Compliance Branch of the Health Products Regulation Group (HPRG) of the Health Sciences Authority (HSA).

This guidance addresses the types of documents to be submitted at the point of application for product registration, and during the post-marketing phase of the therapeutic products (e.g. during variation application review or when new significant safety issues are identified).

The requirements and timelines for reporting safety information related to therapeutic products are also included. The topics covered in this guidance include the following:

- Records of adverse effects;
- Serious adverse reaction (SAR) reporting;
- Risk management plans (RMPs);
- Periodic benefit-risk evaluation reports (PBRERs);
- Updates on actions taken by other regulatory authority or company in response to safety issues.

1.2 BACKGROUND

During the clinical development of a therapeutic product, the patient sample size is relatively small and the patient population recruited into clinical trials are quite homogenous due to the inclusion and exclusion criteria in the

protocol for enrolment into the study. As such, the safety and efficacy experience at the point of market approval of a therapeutic product is usually limited. In spite of rigorous reviews prior to market entry, new safety issues (especially rare ones) may be discovered and characterised with increased usage of the product following marketing authorisation. Therefore, it is important that the safety of therapeutic products is monitored throughout their life cycle after they have been approved for use in the market.

In order to obtain a comprehensive picture of clinical safety, careful planning of pharmacovigilance (PV) and risk minimisation activities (RMAs) throughout the life cycle of the therapeutic product is necessary to characterise its safety profile. The PV activities provide assurance that any new signals are promptly detected, while RMAs are targeted at mitigating known risks associated with these products.

1.3 DEFINITIONS

Adverse effect (AE)

Adverse effect, in relation to a health product, means any debilitating, harmful, toxic or detrimental effect that the health product has been found to have or to be likely to have on the body or health of humans when such health product is used by or administered to humans.

Causality assessment

Determination of whether there is reasonable possibility that the product is etiologically related to the AE. Causality assessment includes assessment of temporal relationships, dechallenge / rechallenge information, association with (or lack of association with) underlying disease, presence (or absence) of a more likely cause, plausibility.

Company

Company refers to the registrant, manufacturer, importer or supplier (wholesaler) of a registered therapeutic product.

CIOMS I form

An AE reporting form developed by the Council for International Organisations of Medical Sciences (CIOMS), intended for notifying the regulatory authorities.

The form can be found at: <http://cioms.ch/index.php/cioms-form-i>

Data Lock Point (cut-off date)

The date designated as the cut-off date for data to be included in a Periodic benefit-risk evaluation report (PBRER).

International Birth Date (IBD)

The date of the first marketing approval for any product containing the active substance granted to any company in any country in the world.

Periodic benefit-risk evaluation report (PBRER)

A PBRER is intended to present a periodic, comprehensive, concise and critical analysis of new or emerging information on the risks of the health product, and on its benefits in approved indications, to enable an appraisal of the product's overall benefit-risk profile.

Risk management plan (RMP)

A detailed description of the risk management system which include a set of pharmacovigilance activities and interventions which are designed to identify, characterise, prevent or minimise risks relating to a therapeutic product.

Serious Adverse Reaction (SAR)

A serious adverse reaction means an adverse effect that is unintended and occurs in association with the use or administration of a therapeutic product at doses normally used in humans for prophylaxis, diagnosis or therapy of a disease or for the restoration, correction or modification of a physiological function, and that

(a) may result in a person's death,

(b) may threaten a person's life,

- (c) results in a person being hospitalised or prolong a person's existing stay in hospital,
- (d) results in a person's persistent or significant disability or incapacity,
- (e) results in a congenital anomaly or birth defect, or
- (f) is judged to be medically important even though the effect might not be immediately life-threatening or result in death or hospitalisation, but may jeopardise the person's health or may require intervention to prevent the person's death or one of the other outcomes referred to in subparagraphs (c), (d) and (e).

When an adverse effect threatens a person's life, it means that the person was at risk of death at the time of event. It does not refer to an event which hypothetically might have caused death if it were more severe.

Medical judgement should be exercised in deciding whether an adverse effect is serious in other situations. Important AEs that are not immediately life-threatening or do not result in death or hospitalisation but may jeopardise the patient should be considered as serious.

Therapeutic product (TP)

"Therapeutic product" is a category of health products regulated under the HPA and is defined in the First Schedule of the HPA. A TP is intended for use by and in humans for a therapeutic, preventive, palliative or diagnostic purpose, and its scope includes chemical and biologic drugs.

2 RESPONSIBILITIES OF THE COMPANY

The company must be responsible for its products in the market and have proper systems and processes in place to take appropriate action, when necessary. This includes having written procedures for the receipt, evaluation of AEs and the reporting of SARs.

The company is responsible for matters relating to product safety and should provide a point of contact on safety matters and updates to the Vigilance and Compliance Branch.

The responsibilities of the company include:

- Report all relevant safety information relating to the therapeutic product to HSA, in accordance with the local requirements stipulated in this guidance;
- Be aware of and ensure compliance with any local post-marketing requirements, obligations or commitments relating to the safety of the therapeutic product, e.g. follow up with RMPs of therapeutic products, safety restrictions imposed on use of therapeutic products;
- Respond promptly to any request from HSA for the provision of information necessary for the benefit-risk evaluation of a therapeutic product, e.g. sales data and list of purchasers; and
- Provide prompt inputs, when required by HSA, on significant safety concerns so that timely and appropriate regulatory action(s) can be taken, e.g. communications to healthcare professionals or patients, or issuance of press releases.

The company should contact the Vigilance and Compliance Branch proactively whenever there are any changes in its contact details, such as the name of the contact person, his/her designation, telephone number, fax number, email address and mailing address. The contact details should be kept up to date at all times.

3 RECORDS OF ADVERSE EFFECTS

The manufacturer, importer or registrant of a therapeutic product must maintain records of every event that concerns any AE arising from the use of the therapeutic product and produce such records for inspection by HSA, when required.

The record must contain all of the following information:

- the proprietary name of the therapeutic product,
- the date on which the manufacturer, importer or registrant first became aware of the event,
- the lot, batch or serial number of the therapeutic product, and
- the nature of the adverse effect.

The record must be **retained for at least 2 years** after the expiry date of the therapeutic product. This will facilitate traceability and retrospective review of emerging signals arising from safety and/or quality issues by HSA.

4 SERIOUS ADVERSE REACTIONS REPORTING

Upon becoming aware of any SARs, the company must report the event to the Vigilance and Compliance Branch as soon as possible **within 15 calendar days**. The regulatory reporting time clock starts as soon as any personnel of the company is aware of the SAR.

All spontaneous reports of SARs must be reported. This includes reports where the company does not agree with the reporter/ reporting healthcare professional's assessment of a possible causal association and reports where the reporter/ reporting healthcare professional has not provided a causality assessment.

SARs which are not suspected of being product-related by the healthcare professional attending to the patient should not be reported unless the company has reasons to suspect a causal association.

4.1 REPORTING REQUIREMENTS

SARs must be reported to the Vigilance and Compliance Branch, and the reports should be as complete as possible and contain essential information to facilitate assessment.

The company may use the Council for International Organisations of Medical Sciences (CIOMS) I form to report SARs. Online reporting is also available at http://www.hsa.gov.sg/ae_online.

The minimum information required for the submission of an initial SAR report is:

- an identifiable reporter/ healthcare professional,
- an identifiable patient,
- an adverse effect, and
- a suspected product.

The name, profession and place of practice of the reporter/ healthcare professional making the report should be included to facilitate the detection of duplicate reports.

The company is to comment on whether there is a causal association between the suspected product(s) and adverse effect(s) and explain how the causality assessment is made.

The completed CIOMS I form can be sent via mail, fax or email to the Vigilance and Compliance Branch.

4.2 FOLLOW-UP REPORTS

When additional medically relevant information is received for a previously reported case, the company is required to submit the follow-up report as soon as possible within 15 calendar days. The reports are to be clearly labelled as follow-up reports (with appropriate cross-referencing).

4.3 LOCAL NON-SERIOUS AE REPORTS & OVERSEAS AE REPORTS

Local spontaneous reports of non-serious AEs and overseas AE reports occurring outside of Singapore need not be reported to HSA. However, records of the events must be maintained and made available upon request.

4.4 REPORTS FROM CONSUMERS

Consumers who report AEs should be encouraged to seek medical attention and get the attending healthcare professional to report the AE. Medical confirmation is strongly encouraged for the purpose of submission to the Vigilance and Compliance Branch. When a consumer is unwilling or unable to seek medical attention, the company, should attempt to obtain as much information as possible from the consumer about his/her AE.

For SARs, voluntary informed consent must be obtained from the consumer before the company contacts the treating healthcare professional for relevant information e.g. medical documentation. This is to facilitate causality assessment of such reports by the company.

4.5 SCIENTIFIC LITERATURE & OTHER POST-MARKETING SAFETY INFORMATION

Any scientific / medical literature or information from unpublished / published study reports, surveys and registries that could change the benefit-risk balance of the registered therapeutic product must be communicated to the Vigilance and Compliance Branch within 15 calendar days after first knowledge. A copy of the relevant report should be provided. If the report is not in English, the company must submit a summary or translation in English.

5 AE REPORTING IN SPECIAL SITUATIONS

5.1 PENDING THERAPEUTIC PRODUCT REGISTRATION APPLICATIONS

Where a therapeutic product registration application is pending review by HSA, the applicant must ensure that any new safety information which may impact the benefit-risk balance of the product is immediately submitted to the Therapeutic Products Branch via HSA_TP_Enquiry@hsa.gov.sg. The applicant is to submit a tabulation of the new or unexpected SARs that have

not been previously submitted and are not mentioned in the proposed Singapore package insert.

The new information may include but not limited to the following examples:

- (i) Safety reports of unexpected or new SARs with evidence of causal relationship;
- (ii) Safety reports where there is suspicion of a change in the frequency or severity of a known effect;
- (iii) Results from studies which may negatively impact the efficacy of the therapeutic product.

5.2 UNREGISTERED THERAPEUTIC PRODUCTS

Importers of unregistered therapeutic products for patients' use must report all suspected cases of local SARs to the Vigilance and Compliance Branch if the information is made available to them, as set out in section 4. They should also follow the requirements on maintaining records of AEs, reporting of adverse effects in special situations and informing on regulatory actions arising from significant safety issues of the therapeutic product as set out in sections 3, 5 and 8 in this guidance respectively. It should be indicated that the suspected therapeutic product reported is not registered in Singapore.

5.3 LACK OF EFFICACY

When the therapeutic product fails to produce the expected pharmacological or therapeutic benefit and results in an adverse outcome for the patient, including a worsening of the condition for which the medication is being taken, such events should be reported. Some examples of classes of therapeutic products where lack of efficacy must be reported are those that are used for the treatment of life threatening or serious diseases, vaccines and contraceptives. Clinical judgment should be used when reporting the event, taking into consideration the local product labelling and disease being treated. Lack of efficacy should also be discussed in the relevant PBRERs.

5.4 REPORTING OF OUTCOMES OF USE DURING PREGNANCY

For therapeutic products which are not recommended for use during pregnancy, when a company is aware that a pregnant woman has consumed the product, the company should follow up with the doctor on the pregnancy outcome. If the pregnancy results in an abnormal outcome and the reporting doctor consider that it might have been due to the product, the company must submit the SAR report to the Vigilance and Compliance Branch within 15 calendar days upon first knowledge.

5.5 DRUG OVERDOSES

Drug overdoses need not be reported.

6 RISK MANAGEMENT PLANS

A RMP is a description of the risk management system that is put in place to identify, characterise, prevent or minimise risks relating to a therapeutic product, so that patients are allowed continued safe access to the therapeutic product. The RMP consists of a safety overview of the therapeutic product, and the proposed PV activities and Risk Minimisation Activities (RMA).

To minimise risks relating to unsafe and inefficacious use of therapeutic products, HSA may direct a registrant of a therapeutic product to implement a risk management plan which includes, but is not limited to the following:

- Production and distribution of educational material;
- Production and distribution of safety information;
- Performance of clinical studies of the therapeutic product;
- Implementation of active surveillance programmes of the therapeutic product;
- Implementation of programmes to restrict the supply of the therapeutic product.

6.1 REQUIREMENTS FOR THE SUBMISSION OF RMP

All new drug applications type 1 (NDA-1) and biosimilar applications must have an accompanying RMP submitted.

For other application types such as NDA-2 or 3, major variation application (MAV) or generic drug application (GDA), RMP documents may be requested by HSA on a case-by-case basis:

- (i) For NDA-2, the request for RMPs may be in response to a new safety concern arising from a new route of administration;
- (ii) For MAV, the request may arise as a result of a new safety concern associated with a new indication that may require additional PV activities and/or RMAs;
- (iii) For GDA, a RMP may be required if the innovator or reference product has safety concerns that have been identified to require additional local PV activities and/or RMAs.

Please refer to the *Guidance on Therapeutic Product Registration in Singapore* for details on the various application types.

6.2 DOCUMENTS TO BE SUBMITTED

The RMP documents are to be provided as part of the application dossier at the point of application submission and should include the following:

- Singapore-Specific Annex (SSA) (refer to section 6.2.1);
- Latest version of the approved EU-RMP and/or US REMS (where available); and
- Proposed local RMP materials (e.g. draft educational materials, if any; refer to section 6.4.2).

The required RMP documents should be attached in PRISM, Section 7 (Supporting Attachments) under Other Supporting Documents. The submission of the documents in hardcopy is not required.

For applications submitted via the full or abridged route, if the applicant is unable to submit the complete RMP documents before the acceptance of the application, a letter of commitment to provide these documents within 40 working days from the date of application acceptance will be required. If the documents are not received within the 40 working days, an Input Request (with corresponding stop-clock imposed) will be sent to the applicant for the submission of the RMP documents. For applications submitted via the verification route, the complete set of RMP documents has to be submitted prior to the acceptance of the application.

During HSA's review of the application, if an updated version of the EU-RMP and/or US REMS becomes available, it should be submitted to the Therapeutic Products Branch. Submission of the updated EU-RMP and/or US REMS should be made as soon as possible upon receipt of the updated documents to facilitate the timely review of the application. The relevant updates to the EU-RMP and/or US REMS should be highlighted in a cover letter.

It is not necessary to submit updated versions of the EU-RMP and/or US REMS after the product applications have been approved, unless otherwise requested by HSA.

Please refer to the *Guidance on Therapeutic Product Registration in Singapore – Appendix 16 Guideline on the submission of risk management plans documents for details.*

6.2.1 SINGAPORE-SPECIFIC ANNEX

The SSA serves as documentation of the RMP to be implemented for the therapeutic product in Singapore. A SSA template is provided in Annex I.

The SSA template includes the following sections:

- Product information (product name and active ingredient[s]);
- Safety concerns (important identified risks and important potential risks);

- Description of the proposed local PV activities (refer to section 6.3);
- Description of the proposed local RMAs (refer to section 6.4); and
- Additional information (if applicable).

6.3 PHARMACOVIGILANCE ACTIVITIES

6.3.1 ROUTINE PV ACTIVITIES

Routine PV activities are those that should be conducted as part of continued efforts to detect safety signals in therapeutic products. Routine PV activities include, but are not limited to the following:

- Reporting of local SARs to the Vigilance and Compliance Branch in accordance with stipulated timeline;
- Timely update on significant safety issues that may influence the overall benefit-risk profile of the product;
- Timely update on safety-related regulatory actions taken by other agencies (in particular, HSA's reference agencies*);
- Submission of PBRERs (for selected therapeutic products if required under registration conditions) (refer to section 7).

** Reference regulatory agencies refer to Australia TGA, EMA, Health Canada, UK MHRA and US FDA*

6.3.2 ADDITIONAL PV ACTIVITIES

Additional PV activities may be required for therapeutic products with important identified or potential risks, in order to provide more timely evidence on the benefit-risk profile of the product. These may include, but are not limited to the following:

- Implementation of active surveillance programme;
- Post-marketing safety studies (applicable to local context);
- Perform additional clinical studies (where required).

6.4 RISK MINIMISATION ACTIVITIES

6.4.1 ROUTINE RMAs

Routine RMAs are activities that should be conducted for therapeutic products to reduce the probability or severity of AEs. These include, but are not limited to the following:

- Provision of warnings and precautions in the package insert (PI);
- Timely safety updates to labelling and packaging.

6.4.2 ADDITIONAL RMAs

Additional RMAs are required for therapeutic products with important identified or potential risks that require an extra level of risk minimisation, in order to strengthen the benefit-risk balance of the products. These may include, but are not limited to the following:

- Provision of physician educational material by the company (refer to section 6.4.3.1);
- Provision of patient medication guide by the company (refer to section 6.4.3.2);
- Issuance of Dear Healthcare Professional Letter;
- Implementation of Restricted Access Programme (RAP) (refer to section 6.4.4);
- Implementation of controlled distribution, e.g. supply to selected physicians/specialists/pharmacies;
- Implementation of pregnancy prevention programme.

6.4.3 EDUCATIONAL MATERIALS FOR PHYSICIANS AND/OR PATIENTS

Educational materials for physicians and/or patients may be requested as part of RMAs when significant safety issues are identified with the use of the therapeutic product during risk assessment at either pre- or post-marketing phases. The objective of such materials is to inform physicians and/or

patients of potential risks associated with the use of these products and to educate them on the early detection and management of AEs.

Where the applicant considers educational materials as part of the local RMAs, the draft educational materials should be submitted together as part of RMP documents at the point of application for therapeutic product registration. The draft educational materials will be reviewed during application evaluation and approved at the point of product registration.

Post-approval revisions affecting the clinical use and/or safety content of the educational materials should be submitted for review and approval by HSA prior to distribution to the healthcare professionals. However, for revisions that do not affect the clinical use and/or safety content of the educational materials (e.g. editorial changes, administrative changes, corrections of typographical errors, and changes in address), a notification of the soft copy of the revised materials to HSA will be sufficient (i.e. approval from HSA is not needed). The revised materials may be distributed following the notification to HSA. All revised educational materials should be submitted via email to HSA_TP_Enquiry@hsa.gov.sg.

As part of ongoing post-marketing benefit-risk review for registered therapeutic products, educational materials may be requested by HSA at any point in time throughout the product life cycle when new significant safety issues are identified in the post-market setting.

6.4.3.1 PHYSICIAN EDUCATIONAL MATERIALS

Physician educational materials may be requested when risk assessment shows that safety concerns identified with the use of a therapeutic product may be mitigated under situations that may include, but are not limited to the following:

- Physicians are made aware of the risks and can therefore make informed decisions to select appropriate patients who may benefit from the therapy;

- Physicians are reminded to adhere closely to the recommended dosing information and advisories;
- Physicians are made aware of the need for regular monitoring and/or laboratory testing that could affect the decision to continue or modify the patient therapy;
- Physicians receive adequate information regarding the monitoring of early signs of AEs that could require discontinuation or modification of patient therapy;
- Physicians are made aware of the potential risk for medication error.

The key information to be stated in the physician educational material may include, but is not limited to:

- Local approved indication(s) of the product;
- Contraindications (if any);
- Important AEs associated with the product;
- Monitoring parameters to manage the AEs;
- Patient counselling and information;
- For biosimilar products, there should also be a generic paragraph to remind physicians of the following:
 - Information regarding interchangeability,
 - The importance of keeping good records of patients prescribed the biosimilar product (including the batch number) for traceability purposes in the event of safety/quality concerns, and
 - To report AEs (including brand name and batch and/or lot number) associated with the biosimilar product to the registrant and HSA.

6.4.3.2 PATIENT MEDICATION GUIDES

Patient medication guides may be requested when risk assessment shows that safety concerns identified with the use of a therapeutic product may be mitigated under situations that include, but are not limited to the following:

- Patients are able to monitor themselves for early signs of AEs;
- Patients know when to seek medical attention;
- Important food-drug interactions that the patients need to be aware of;

- Patients are required to adhere closely to the directions for use of the prescribed medication;
- Patients are aware of lifestyle modifications required while on the medication (e.g. drugs that are associated with teratogenicity).

The key information to be stated in the patient medication guide may include, but is not limited to:

- Local approved indication(s) of the product;
- Contraindications (if any);
- Important AEs associated with the product;
- Scenarios under which medical attention may need to be sought.

6.4.3.3 DISTRIBUTION OF EDUCATIONAL MATERIALS

The registrant must ensure that all healthcare professionals who will be prescribing the therapeutic product are provided with a copy of the latest HSA-approved physician educational materials. Copies of the latest approved patient medication guides, where applicable, must also be made available to healthcare professionals for distribution to all patients who will be supplied with the therapeutic product.

The registrant must keep records of the distribution of the educational materials to healthcare professionals. The distribution records must include:

- Names of the healthcare institutions/clinics/pharmacies receiving the educational material(s); and
- Date of distribution of the educational material(s).

The distribution records must be submitted to HSA when requested.

6.4.4 RESTRICTED ACCESS PROGRAMMES

A therapeutic product may be subjected to the requirements of a RAP following a benefit-risk assessment by HSA, when it is assessed to be associated with significant safety issue(s) that affect(s) its overall benefit-risk profile but is still beneficial for a selected group of patients with no suitable

therapeutic alternatives. The RAP allows for continued safe use of the product in the local market while ensuring that adequate measures are put in place to mitigate its risks.

Components of the RAP may include, but are not limited to the following:

- Supply of products only to healthcare professionals who have enrolled in the RAP;
- Letter of undertaking by physicians to indicate that they are aware of the serious safety issue(s) associated with the use of the product, will discuss the risks involved with the patients and obtain their informed consent before prescribing and/or dispensing the product;
- Letter of undertaking by pharmacists in charge of institutions or clinics who will be dispensing the therapeutic product to indicate that they are aware of the serious safety issue(s) associated with the use of the product and conduct proper counselling;
- Patients' informed consent that they understood the potential risks involved with the use of the product;
- Submission of updated list of healthcare professionals enrolled in the RAP to HSA;
- Regular submission of sales data of the product to HSA.

7 PERIODIC BENEFIT-RISK EVALUATION REPORTS

The preparation of PBRERs for regulatory authorities is a routine pharmacovigilance activity outlined in the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) E2E guidelines. The guidance on the format and content of the PBRER can be referenced from the latest version of ICH E2C (R2): Periodic Benefit-Risk Evaluation Report, available at <http://www.ich.org/>.

7.1 REPORTING REQUIREMENTS FOR PBRERs

HSA may require any registrant of a therapeutic product to submit, within the timelines specified by the Authority, a benefit-risk evaluation report relating to

the therapeutic product should significant safety concerns be identified during pre- and post-marketing of the product and assessed to require further close monitoring. PBRERs may be submitted to the Therapeutic Products Branch via HSA_TP_Enquiry@hsa.gov.sg.

The registrant of a therapeutic product must submit the benefit-risk evaluation report:

- (a) for an initial period of 2 years, at intervals of 6 months commencing from either the date of registration of the therapeutic product, or its international birth date; and
- (b) annually, for the next 3 years.

After the initial 5 years of registration approval, HSA may request in writing for PBRERs to be continued to be submitted if there are reasons to continue the safety monitoring of the therapeutic product in the market. Each PBRER should cover the period of time since the last updated report and must be submitted within 70 days (for PBRER covering up to 12 months) or 90 days (for PBRERs covering more than 12 months) from the data lock point.

8 UPDATE OF ACTIONS TAKEN BY OTHER REGULATORY AUTHORITY OR COMPANY

The registrant must inform the Vigilance and Compliance Branch as soon as possible, of any regulatory actions taken by other regulatory authorities, or action(s) taken by the company arising from significant safety issues of the therapeutic product.

Significant safety issues are those which may influence the overall benefit-risk profile of the product and may include but are not limited to the following:

- Product withdrawal;
- Product recall and product defects;
- Removal of approved indications by regulatory agencies;
- Failure to obtain a product registration renewal due to safety reasons;

- Dissemination of Dear Healthcare Professional Letter related to safety issues.

The safety related reasons that led to these actions should be described and notified to HSA with supporting documents, where appropriate. Each notification should be accompanied with an assessment by the registrant, of the significance of the regulatory action in the local context and recommendation(s) on follow-up action(s) to be undertaken locally. Any intention of voluntary local withdrawal / discontinuation of a registered therapeutic product from the market by the registrant arising from safety issues should be discussed with HSA at an early stage.

ANNEX I

RISK MANAGEMENT PLAN - SINGAPORE-SPECIFIC ANNEX TEMPLATE**I Product Information**

Product name:	e.g. ABC123
Active ingredient(s):	e.g. safetyzumab

II Safety Concerns

To list the important safety concerns relevant in the Singapore context.

<p>Important identified risks (an untoward occurrence for which there is adequate evidence of an association with the therapeutic product)</p>	<p>e.g.</p> <ul style="list-style-type: none"> • Drug-induced liver injury (DILI) • Severe cutaneous adverse reactions (SCAR) • Heart failure • Myopathy • Rhabdomyolysis • Elevated liver enzymes (ALT and AST)
<p>Important potential risks (an untoward occurrence for which there is some basis for suspicion of an association with the therapeutic product)</p>	<p>e.g.</p> <ul style="list-style-type: none"> • Malignant cell growth (haematological malignancy) • QT prolongation • Peripheral neuropathy • Potential medication error/ dispensing error • Unknown safety in special populations (e.g. elderly, immunocompromised patients, patients who are renally impaired or with hepatic dysfunction)

III Description of the Proposed Local Pharmacovigilance (PV) Activities

To describe the PV activities (routine and/or additional), relevant to the local context, that are planned to address the safety concerns.

(A) Routine PV Activities *[required for all products]*

Please refer to the *Guidance for Industry – Post-marketing Vigilance Requirements for Therapeutic Products* on the respective timelines for the following routine PV activities.

✓	Reporting of local serious adverse reactions to the Vigilance and Compliance Branch, HSA in accordance with stipulated timeline
✓	Timely update on significant safety issues that may influence the overall benefit-risk profile of the product

- Timely update on safety-related regulatory actions taken by other agencies, particularly HSA’s reference agencies (i.e., Australia TGA, EMA, Health Canada, UK MHRA and US FDA)

(B) Additional PV Activities

Where applicable, to include planned date for such activities. If no additional PV activities are considered to be required, it should be indicated as such (i.e. “Nil”).

Examples: Active surveillance programme, post-marketing safety studies (applicable to local context), etc.

e.g. To conduct active soliciting of local serious adverse reaction reports associated with the use of ABC123 from physicians who prescribe the product. Solicited local serious adverse reaction reports will be compiled on a quarterly basis and submitted to the Vigilance and Compliance Branch, HSA. (e.g. end of March, June, September, December)

IV Description of the Proposed Local Risk Minimisation Activities (RMAs)

To describe RMAs (routine and/or additional), relevant to the local context, that are planned to address the safety concerns.

(A) Routine RMAs [required for all products]

- Provision of warnings and precautions in the package insert
- Timely safety updates to labelling and packaging of products

(B) Additional RMAs

If no additional RMAs are considered to be required, it should be indicated as such (i.e. “Nil”).

Examples: Provision of physician educational materials and patient medication guides, provision of sales data, issuance of Dear Healthcare Professional Letter, implementation of restricted access programme, controlled distribution, pregnancy prevention programme

e.g.

- Physician educational material is developed to highlight the identified safety concerns, signs and symptoms to look out for and to highlight on the potential risk of medication error/dispensing errors
- A patient medication guide is developed to highlight the identified safety concerns, signs and symptoms to look out for and when to seek medical attention
- A Dear Healthcare Professional Letter will be issued to reinforce the significant safety concerns at product launch

V Additional Information

To list the RMP documents enclosed in this application and to provide other comments (if any)

e.g.

The following RMP documents are enclosed in this application for your perusal:

- Latest version of the approved EU-RMP (i.e. version 2.1)
- Draft physician educational materials and patient medication guides
- Draft Dear Healthcare Professional Letter

Last updated: 1 November 2016
