HSA UPDATES

“HSA UPDATES” addresses topics of current public interest, and is subject to change as more information becomes available.
HSA UPDATES NO 3/2017

HSA UPDATES ON FOREIGN ALERTS ISSUED ON ADULTERATED HEALTH PRODUCTS FOUND IN OTHER COUNTRIES/REGIONS (APR - MAY 2017)

The Health Sciences Authority (HSA) would like to update the public on adulterated health products found by regulatory agencies overseas between April and May 2017. This information is provided to increase awareness on safety issues of health products reported overseas, which may impact the local population. Please refer to Annex A and B of the pdf version for the list of adulterated health products and the possible side effects of the undeclared potent ingredients.

Local Situation

2 To-date, these products are not detected to be sold in Singapore. Nevertheless, there is a possibility that consumers may have purchased them over the Internet, or from overseas.

HSA’s Advisory

- 3 Members of the public are advised to:
- Stop consuming the products if you have purchased or are consuming any of them, and consult a doctor if you are feeling unwell.
 - Avoid buying any of the products when abroad.
 - Be wary of products that promise quick and miraculous results or carry exaggerated claims like “100% safe”, “no side effects” or “scientifically proven”. Consumers should also be cautious of products that produce unexpected quick recovery of medical conditions. Consult your doctor or pharmacist if you need help for the management of your acute and chronic medical symptoms and conditions (e.g. diabetes, hypertension, eczema).
 - Exercise caution when purchasing health products online or from sources (either local or overseas) which you may not be familiar with, even if well-meaning friends or relatives have recommended them. You cannot be certain where and how these products were made. They may be illegal, counterfeit or substandard, and may contain undeclared ingredients which can harm your health. If buying health products online, we encourage you

to buy them from websites with an established retail presence in Singapore.

4 Additionally, members of the public are encouraged to visit www.healthdangers.sg to learn more about the dangers of buying health products from dubious sources.

5 Members of the public who come across the sale and supply of these adulterated products or other illegal products in Singapore may contact HSA's Enforcement Branch at Tel: 6866-3485 during office hours (Monday to Friday) or email: hsa_is@hsa.gov.sg.

**HEALTH SCIENCES AUTHORITY
SINGAPORE
20 JULY 2017**

▪ **About the Health Sciences Authority (HSA)**

The Health Sciences Authority (HSA) applies medical, pharmaceutical and scientific expertise through its three professional groups, Health Products Regulation, Blood Services and Applied Sciences, to protect and advance national health and safety. HSA is a multidisciplinary authority. It serves as the national regulator for health products, ensuring they are wisely regulated to meet standards of safety, quality and efficacy. As the national blood service, it is responsible for providing a safe and adequate blood supply. It also applies specialised scientific, forensic, investigative and analytical capabilities in serving the administration of justice. For more details, visit <http://www.hsa.gov.sg/>.

For more updates on public health and safety matters, follow us on Twitter at www.twitter.com/HSAsg.

▪ **About HSA Updates**

The “HSA Updates” seeks to provide current information, in a consistent and accurate manner, on topics of public interest. For all issues of HSA Updates, please visit www.hsa.gov.sg click “News & Events”, and select “HSA Updates”.

Media representatives are welcome to send any queries to the Corporate Communications Department @ HSA.

List of Adulterated Products

The possible side effects of the undeclared potent ingredients

Anabolic steroids

Anabolic steroids mimic the effects of the male hormone, testosterone. They are used in the treatment of hormonal deficiency conditions and should only be taken under medical supervision. Anabolic steroids are not approved for use to increase muscle mass or boost athletic performance. Taking such medication without medical supervision can be dangerous as they can cause serious side effects such as insomnia, irritability, aggressive behaviour, hypertension, liver cancer, development of prominent breasts in men and impotence.

Andarine and Ostarine

Andarine and ostarine which are selective androgen receptor modulators (SARMs) that are anabolic steroid-like substances. The use of SARMs and anabolic steroid-like substances may cause liver injury, increased risk of heart attack and strokes.

Chloramphenicol

Chloramphenicol is an antibiotic used to treat bacterial infections. It is a prescription medicine and should be used under medical supervision. Chloramphenicol can potentially cause serious adverse effects including nausea, vomiting, diarrhoea, headaches and liver injury.

Diclofenac

Diclofenac is a potent painkiller and may potentially cause serious gastric bleeding, as well as cardiovascular events such as heart attacks and stroke when used for a prolonged period. It should be used under close medical supervision, especially in patients with underlying heart conditions, stomach bleeding and ulceration. Prolonged use may lead to heart attacks and stroke.

Fibanserin

Fibanserin is used to treat low sexual desire disorder in women and can potentially cause adverse effects such as nausea, dizziness, fatigue, somnolence and low blood pressure.

Levodopa (L-Dopa)

Levodopa, is a prescription drug used in the treatment of Parkinson's Disease and should be used under the supervision of a doctor. Levodopa may potentially interact with medicines used to treat high blood pressure. Side effects of levodopa may include low blood pressure, irregular heart rate and breathing abnormalities.

Phenolphthalein

Phenolphthalein has not been registered in Singapore since 2011. Phenolphthalein may cause rashes, abdominal cramps, breathing difficulties, kidney disorders.

Phosphodiesterase Type 5 (PDE-5) Inhibitors

PDE-5 inhibitors are used to treat male erectile dysfunction and should be used under medical supervision. These class of medicine include sildenafil, tadalafil and hydroxyhomosildenafil. These medicines can potentially cause serious adverse effects such as decreased or loss of vision and hearing, strokes, heart attacks and priapism (painful and exceedingly long erections). If priapism is not treated immediately, it may lead to permanent impotence. PDE-5 Inhibitors are also not suitable for patients with medical conditions such as certain heart-related problems or who are on heart medications such as nitrates. Deaths of patients found to be using Sildenafil (PDE-5 Inhibitor) while on nitrates have been reported overseas.

Sibutramine

Sibutramine, previously a prescription-only weight loss drug used in the treatment of obesity, has been disallowed for sale in Singapore since 2010 due to increased risk of heart attacks and strokes. The use of sibutramine has been associated with serious adverse effects, including high blood pressure, irregular heartbeats, hallucinations and mood swings.

Zopiclone

Zopiclone is a prescription medicine used to treat insomnia and should be used under the supervision of a doctor. Zopiclone can potentially cause serious adverse effects including confusion, agitation, irritability, dry mouth and somnolence.
