Dear Valued Customer:

As part of our strong commitment to quality, Edwards Lifesciences continuously monitors our products throughout their life cycle to quickly identify and correct any potential issues. We recently became aware of an issue with one lot of a Disposable Pressure Transducer System where customers are having difficulty priming the system. We request that you complete the attached Acknowledgement Form and return to Edwards Lifesciences per the instructions on the form. The product is being voluntarily recalled by Edwards Lifesciences.

Description and Indication of product being recalled:

The Edwards pressure monitoring kit with TruWave disposable pressure transducer is a sterile, single-use kit that monitors pressures when attached to pressure monitoring catheters. The disposable sterile cable interfaces exclusively with an Edwards cable that is specifically wired for the monitor being used. The TruWave disposable pressure transducer has a straight, flow-through design across the pressure sensor, and is available with or without the integral flush device.

The pressure monitoring kit with TruWave disposable pressure transducer is for use on patients requiring intravascular, intracranial, or intrauterine pressure monitoring.

Description of the problem:

This non-conformance has to do with the inability to flush a Disposable Pressure Transducer System upon the initiation of priming. If this occurs, the clinician can obtain another DPT with minimal delay in set-up time. This occurs before use.

If you have any questions, please contact Edwards Customer Service or Tech Support at +6596584570, option 1.

Sincerely,

Sunita Das
Director I Quality Assurance
Edwards Lifesciences
