

**IMFINZI®**

**(durvalumab)**

## **PATIENT MEDICATION GUIDE**

### **1. WHAT IMFINZI IS AND WHAT IT IS USED FOR**

IMFINZI (durvalumab) is used to treat two types of lung cancer called extensive-stage small cell lung cancer (ES-SCLC) and locally advanced, non-small cell lung cancer (NSCLC), biliary tract cancer (BTC), endometrial cancer, as well as a type of liver cancer called unresectable hepatocellular carcinoma (uHCC) in adults.

IMFINZI in combination with chemotherapy is used when your ES-SCLC:

- has spread extensively within your lungs and cannot be removed by surgery and radiation therapy, or
- has spread to other parts of your body

IMFINZI in combination with chemotherapy before surgery, followed by IMFINZI alone after surgery, is used when your NSCLC can be removed by surgery and is at high risk of recurrence, and you have no known epidermal growth factor receptor (EGFR) mutations or anaplastic lymphoma kinase (ALK) rearrangements.

IMFINZI may also be used alone if your NSCLC:

- has spread within your lungs and cannot be removed by surgery, and
- has responded or stabilised after initial treatment with chemotherapy and radiotherapy.

IMFINZI in combination with chemotherapy is used when your BTC, such as cancer of the bile ducts (cholangiocarcinoma) and gallbladder:

- has spread within these regions (or to other parts of the body).

IMFINZI in combination with tremelimumab is used if your uHCC:

- cannot be removed by surgery (unresectable), and
- you have not received prior oral or injectable medicines for it.

IMFINZI in combination with chemotherapy is used when your endometrial cancer has spread to other parts of your body or has reappeared, followed by treatment with:

- IMFINZI alone if your endometrial cancer is mismatch repair deficient (dMMR).
- IMFINZI in combination with olaparib if your endometrial cancer is mismatch repair proficient (pMMR).

IMFINZI may be given in combination with other anti-cancer medicines. If you have any questions about these medicines, ask your doctor.

IMFINZI works by helping your immune system fight your cancer.

## **2. WARNINGS AND PRECAUTIONS**

Tell your doctor before you are given IMFINZI if you have:

- an autoimmune disease (an illness where the body's immune system attacks its own cells);
- an organ transplant;
- lung problems or breathing problems;
- liver problems.

## **3. MONITORING AND REPORTING SIGNS OF SIDE EFFECTS**

In some patients, IMFINZI can cause the immune system to attack normal organs and tissues and can affect the way they work. These problems can sometimes become serious or life-threatening and can lead to death if left untreated.

While you are on IMFINZI, you will need to look out for any signs of side effects. However, keep in mind that you may have been experiencing side effects from your cancer or previous treatments before you started treatment with durvalumab.

### **CATCH YOUR SIDE EFFECTS EARLY**

If a side effect is identified early, it may be managed before becoming more serious and possibly causing treatment to be stopped.

It is important to let your doctor know of any changes in your body. Talk to him/her about how you are currently feeling, new signs of side effects, or any other change. Remember, a small side effect can lead to something more serious if not treated.

If you have any questions about your treatment, ask your doctor. The information in this brochure does not take the place of talking to your care team about your cancer or treatment.

Do not attempt to treat side effects yourself before talking to your doctor.

#### 4. POSSIBLE SIDE EFFECTS AND IMPORTANT SIGNS/SYMPTOMS TO LOOK OUT FOR

Like all medicines, IMFINZI can cause side effects, although not everybody gets them.

Frequency	SCLC	NSCLC	BTC
<b>Very common (may affect more than 1 in 10 people)</b>	<ul style="list-style-type: none"> <li>• Decrease in white blood cells – susceptibility to infection</li> <li>• Decrease in red blood cells – early tiredness or difficulty in breathing</li> <li>• Decrease in platelets – easy bruising</li> <li>• Cough</li> <li>• Nausea</li> <li>• Constipation</li> <li>• Vomiting</li> <li>• Hair loss</li> <li>• Fatigue</li> <li>• Decreased appetite</li> </ul>	<ul style="list-style-type: none"> <li>• Decrease in red blood cells – early tiredness or difficulty in breathing</li> <li>• Decrease in white blood cells – susceptibility to infection</li> <li>• Decrease in platelets – easy bruising</li> <li>• Underactive thyroid gland that can cause tiredness or weight gain</li> <li>• Nausea</li> <li>• Constipation</li> <li>• Diarrhoea</li> <li>• Vomiting</li> <li>• Fatigue</li> <li>• Increase in liver enzymes (aspartate aminotransferase, alanine aminotransferase)</li> <li>• Decreased appetite</li> <li>• Peripheral neuropathy</li> <li>• Cough</li> <li>• Rash</li> <li>• Hair loss</li> <li>• Pruritus</li> </ul>	<ul style="list-style-type: none"> <li>• Decrease in red blood cells – early tiredness or difficulty in breathing</li> <li>• Decrease in white blood cells – susceptibility to infection</li> <li>• Decrease in platelets – easy bruising</li> <li>• Diarrhoea</li> <li>• Stomach pain</li> <li>• Constipation</li> <li>• Nausea</li> <li>• Vomiting</li> <li>• Fatigue</li> <li>• Fever</li> <li>• Increase in liver enzymes (aspartate aminotransferase, alanine aminotransferase)</li> <li>• Decreased appetite</li> <li>• Skin rash</li> <li>• Pruritus</li> </ul>

## IMPORTANT SIGNS AND SYMPTOMS TO LOOK OUT FOR

Look out for the following signs and symptoms so they may be caught and managed early.  
Call or see your doctor as soon as it is possible if you develop any of the following signs and symptoms or if they get worse.  
Do not attempt to treat any of the symptoms without talking to your doctor first.

INFLAMMATION OF LUNGS		HORMONE GLAND PROBLEMS (ESPECIALLY THE THYROID, ADRENALS, PITUITARY AND PANCREAS)		INFLAMMATION OF KIDNEYS	
	<ul style="list-style-type: none"><li>• New or worsening cough</li><li>• Shortness of breath</li><li>• Chest pain</li></ul>		<ul style="list-style-type: none"><li>• Fast heart rate</li><li>• Extreme tiredness</li><li>• Weight gain or weight loss</li><li>• Dizziness or fainting</li><li>• Feeling more hungry or thirsty than usual</li><li>• Headaches that will not go away or unusual headaches</li><li>• Hair loss</li><li>• Feeling cold</li><li>• Constipation</li><li>• Changes in mood or behaviour, such as decreased sex drive, irritability or forgetfulness</li><li>• High blood sugar</li><li>• Passing urine more often than usual</li><li>• Fast and deep breathing</li><li>• Confusion</li><li>• A sweet smell to your breath</li><li>• A sweet or metallic taste in your mouth</li><li>• A different odour to your urine or sweat</li></ul>		<ul style="list-style-type: none"><li>• Producing less urine than normal</li><li>• Blood in urine</li><li>• Swollen hands or legs</li><li>• Painful urination</li></ul>
INFLAMMATION OF LIVER				SKIN PROBLEMS (RASH or DERMATITIS)	
	<ul style="list-style-type: none"><li>• Yellowing of your skin or the whites of your eyes</li><li>• Severe nausea or vomiting</li><li>• Pain on the right side of your stomach</li><li>• Drowsiness</li><li>• Dark urine (tea coloured)</li><li>• Bleeding or bruising more easily than usual</li><li>• Feeling less hungry than usual</li></ul>				<ul style="list-style-type: none"><li>• Rash</li><li>• Itching</li><li>• Skin blistering</li><li>• Ulcers in mouth or other mucous membrane</li><li>• Easy bruising</li></ul>

INFLAMMATION OF INTESTINE		INFLAMMATION OF HEART		INFLAMMATION OF MUSCLES	
	<ul style="list-style-type: none"> <li>• Diarrhoea</li> <li>• More bowel movements than usual</li> <li>• Stools that are black, tarry, sticky, or have blood or mucus</li> <li>• Severe stomach pain or tenderness</li> </ul>		<ul style="list-style-type: none"> <li>• Shortness of breath during exercise or exertion</li> <li>• Tiredness</li> <li>• Heart palpitations</li> <li>• Chest pain</li> </ul>		<ul style="list-style-type: none"> <li>• Muscle pain or stiffness</li> </ul>
OTHER SYMPTOMS		INFUSION-RELATED REACTIONS		INFLAMMATION OF BRAIN	
	<ul style="list-style-type: none"> <li>• Neck stiffness</li> <li>• Fever</li> <li>• Confusion</li> <li>• Changes in mood or behaviour</li> <li>• Blurry or double vision</li> <li>• Eye pain or redness</li> <li>• Other vision problems</li> <li>• Hoarseness of voice</li> <li>• Night sweats</li> <li>• Dental infection</li> </ul>		<ul style="list-style-type: none"> <li>• Chills or shaking</li> <li>• Itching or rash</li> <li>• Flushing</li> <li>• Shortness of breath or wheezing</li> <li>• Dizziness</li> <li>• Fever</li> </ul>		<ul style="list-style-type: none"> <li>• Seizures</li> <li>• Headache</li> <li>• Fever</li> <li>• Chills</li> <li>• Vomiting</li> <li>• Confusion</li> <li>• Sleepiness</li> </ul>

## **5. ADDITIONAL SAFETY INFORMATION**

- If you get any side effects, talk to your doctor.
- Getting medical treatment right away may help keep these problems from becoming more serious.
- Your healthcare provider will check you for these problems during your treatment with IMFINZI.
- Your healthcare provider may delay or completely stop treatment with IMFINZI if you have severe side effects.
- If you visit the emergency room or doctor who is not your regular care team, it is important to tell them that you are getting an immunotherapy.
